

⇒ Strings :-

- Iterable (can be indexed)
- Immutable (can not be changed once defined)
- case fold, center(), endswith, startswith()

⇒ Format Method :- 'My name is { }'.format(-)

>>> 'My name is { }'.format('Mridul')

⇒ My name is Mridul

⇒ f'My name is {name}'

If a method starts with 'is' then the return value will be True/False & will be used in if/else statements.

Strings have very useful methods.

- startswith
  - endswith
  - Split
  - strip/lstrip.
  - Case fold.
  - format (Different formats).
  - upper / lower
- Swap case
  - And some others
