Books table

Customer Table

```
class Library (Connection):
    def __init__(self, file):
```

Books
Table ✓ sql1 = " Books Table :"

Customer
Table ✓ sql2 = " Customer table "

Customer Id	Customer Name	Contact	Address

sql2 = """""" SQL query for Customer Table """"""

Write it down ?

```
sql2 = ''' create table if not exists
            Customer ( CustomerId Integer
                       Primary key,
                  Name  Varchar(50),
                  Contact Integer ,
                  Address  Varchar(100));
            '''
```
